

KAGUYA REWORK - ART TODO

(current state)

Sidescroller, Mount Fuji backdrop, story across Level 1
+ Level 2 →
transition into Level 3 (chasing NegaKasey).

ALREADY HAVE

- NegaKasey (main villain)
- Player character
- Demon (common enemy)
- Volcano (common enemy)
- Mount Fuji background

Everything below is what's still missing.

1. THE FIVE PRINCE BOSSES

Each needs a full new sprite sheet, 64x64 frames, 24
total, same layout
convention as your other bosses:
0-5 idle

6-8 jump

9-11 fall

12-17 run

18-20 attack wind-up

21-23 attack release/recover

- **Prince Ishitsukuri** —

public/sprites/ishitsukurisprite.png

18-20 wind-up: raises the fake stone bowl

overhead two-handed,

unsteady stance (he's a poser, not a fighter —
should read

as showy rather than skilled)

21-23 release: brings the bowl down in an
overhead smash, then

stumbles slightly on the follow-through/recovery

- **Prince Kuramochi** —

public/sprites/kuramochisprite.png

18-20 wind-up: plants feet, holds the jeweled
branch out

horizontally like a spear, branch trembling

21-23 release: lunging thrust forward with the
branch, jewels

scattering off it slightly on impact (cosmetic —
cheap

fakes, they chip)

- **Minister Abe** — public/sprites/abesprite.png

18-20 wind-up: robe flares as he spins it like a

cape/whip,
fire licking along the hem (panicked energy, not
controlled)
21-23 release: robe-whip crack forward, followed
by a stagger/
beat-out-the-flames recovery – he's always half-
fighting
his own costume

- **Minister Ōtomo** – public/sprites/otomosprite.png
18-20 wind-up: low charging crouch, one arm
raised presenting the
dragon's jewel like a trophy (arrogant, confident
telegraph –
biggest wind-up of the five, matches his boastful
dialogue)
21-23 release: full-body dash/ground-slam using
the jewel as an
improvised weapon (this is the one keeping the
old
charge-dash + slam moveset)
- **Lord Isonokami** –
public/sprites/isonokamisprite.png
18-20 wind-up: reaching/climbing motion, shell
held up defensively
more than offensively (he's the least confident
fighter –
wind-up should read hesitant)
21-23 release: an awkward overhead swipe with

the shell, followed
by an exaggerated stumble/limp recovery
(callback to him
getting hurt in the myth – recovery frame can
double as his
flinch/hit-reaction if you want to save a frame)

2. PRINCESS KAGUYA - new character (non-enemy)

File: public/sprites/princesssprite.png

Frame size: 64x64

Frames:

0-3 idle (standing, ambient sway)

4-7 talk/dialog (courtyard reveal scene)

8-11 reveal/reaction (calling out the princes' lie)

12-15 moonlight cast (raising a hand to open the
transport effect)

Also useful: one still portrait/bust image if dialog
boxes use portraits.

3. THE FIVE RELIC ITEMS

Each is a small static icon/prop – no animation
needed unless you want a
subtle idle shimmer. These are what the player
actually finds and hands
off during the trials, and what the princes falsely claim

as their own.

- Buddha's stone bowl (Ishitsukuri's trial)
- Jeweled branch of Mount Hōrai (Kuramochi's trial)
- Robe of the fire rat (Abe's trial) — consider a "smolder" variant

for the moment it's tested near flame in the reveal scene

- Dragon's jewel (Ōtomo's trial)
- Swallow's cowrie shell (Isonokami's trial)

Suggested file: public/sprites/relic_items.png as one small sheet

(5 icons, consistent size, e.g. 32x32 each).

4. MOONLIGHT TRANSPORT EFFECT

Used at the end of Level 2 when Kaguya moves the player to Level 3.

Needs:

- a particle/glow sheet (soft light motes, moon-pale color palette)
- a "fold away" or "dissolve" transition treatment for the courtyard background (could be a simple radial wipe/fade if a full custom animation is too costly)
- optional: a brief beam-of-moonlight overlay effect for when Kaguya raises her hand

File suggestion:

public/effects/moonlight_transport.png (sprite sheet)
or handled as a shader/tween if no dedicated art
wants to be made for it
— flagging both options since this could go either way
depending on
budget.

5. NEGAKASEY THEFT MOMENT

(cosmetic, optional)

A quick "shadow snatch" effect for when NegaKasey
yanks the items from
Kaguya's hands — could reuse an existing dash/blur
effect if you have
one, otherwise a simple dark particle burst would sell
the moment
without needing new dedicated art.

SUGGESTED ORDER

1. Princess Kaguya (needed for both levels' framing scenes, most reused)
2. The five relic items (small, quick wins, needed throughout both levels)
3. The five prince bosses (biggest lift — can be done in any order,
Ōtomo probably first since he opens the gauntlet)

4. Moonlight transport effect
5. NegaKasey theft moment (lowest priority, easiest to fake with an existing effect in the meantime)
